Perhaps the most important lesson from that past year is that setting your company up for success, no matter what comes next, starts with becoming more responsive to customer needs. Agility can help establish CX as your competitive advantage, not just for the next crisis, but for every year and decade to come.

**What is agility?**

Agility is a business’ ability to respond to changing conditions quickly, make change easier to manage, and turn change into opportunities to better connect with customers.

To become more agile, manufacturers need to:

- Make it easier to hear what customers are saying
- Design teams to stay productive through change
- Invest in flexible technology that supports CX goals

**Make it easier to hear what customers are saying**

If you’re in manufacturing, it should be easy for your customers to connect with you. 89 percent of agents at manufacturing companies say they use more than one channel to communicate with customers during a given day. But it doesn’t stop there.

Making sense of customer feedback and data, and ensuring that information is visible across teams in one easy-to-access place is a key step to improving customer experience. Unfortunately, 28 percent of these agents say their single view of the customer could be improved.
Design your teams to stay productive through change

Internal collaboration remains a trouble spot for most manufacturing companies, especially with remote teams. 47 percent of support agents say that since the start of the pandemic, it takes more effort to collaborate with teams outside of customer service. And that’s a missed opportunity, since 58 percent believe that more collaboration would help them be more effective.

Knowledge sharing is an important step. When ticket volume increased, 73 percent of companies with the best CX metrics added help center articles. That’s 2.2 times more than their under-performing peers. And automation can also help teams scale smartly. 29 percent of manufacturers say they are adding or expanding AI or ML capabilities.

Invest in flexible technology that supports your CX goals

Any tech investment is a large one. Manufacturers should be looking for a CX solution that plays nicely with others. Ideally you’ll want an open, flexible platform that works out of the box, but can be easily reconfigured to suit your needs. Luckily, 40 percent of manufacturers expect their technology budget to increase, with 6 percent expecting an increase of more than 25 percent.

With companies already planning their budgets and teams with agility in mind, it’s essential to build up an omnichannel support strategy. That means embracing messaging, adding apps and integrations to augment the experience, and deploying automations and AI to streamline the process wherever possible.
